

BACKPACKS AND WEAPON BAGS

CZ 4M FORWARD OPERATING POINT 35

TACTICAL BACKPACK

The CZ 4M FOP 35 combat backpack is designed for a wide range of military or police operations. It can be used as a backpack for short patrols or, as a supplement to special interior accessories, as a specialist backpack.

The FOP 35 backpack has been tested in development and operational tests for use with a load of up to 40 kg!

The backpack is divided into two compartments, a smaller front and a large rear, main compartment. The main compartment is equipped with a zipper around the perimeter. It can be fully unbuckled and quickly and noiselessly opened, during low visibility, injury, or where it is necessary to locate and use the carried equipment immediately. This makes it a unique tactical gear. The rear of the backpack is fitted with a rigid but flexible partition, so that when carrying ammunition magazines, radios and batteries or anything bulky with sharp edges, there is no pressure or impact on the user's back. The FOP 35 is designed for real combat deployment and its design is therefore subject to 100% reliability in any conditions and load.

Main compartment is equipped with MOLLE and VELCRO surfaces for well-arranged and configurable organization of mounted equipment. Each of the compartments is further equipped with pockets for small equipment.

The height adjustment system of the shoulder straps and hip belt (4 + 4 positions) allows for extensive size configuration of the structure according to the height of the user's figure.

Shoulder straps can be replaced with BACS - Body Armor Compatible System - a special extended version of straps and lumbar support designed for use with a ballistic vest. If the weight of the carried material exceeds 15 kg, a more robust carrying system of the EXPEDITION 60 backpack can be used.

The backpack can be supplemented with external pockets and the front pocket can be supplemented with a hidden holster for the PDW weapon type (e.g. CZ Scorpion EVO).

The quick release system allows the carrying bag with shoulder straps to be thrown away in an emergency.

However, the hip belt remain in place attached to the user even after the activation of the quick release system, so the weapons and equipment fastened to the belt remain in place.

Extreme durability and high load capacity for versatile use.

1. Compatible radio/antenna cords and hydration bags
2. Two types of shoulder straps
3. Ergonomic design
4. Tactical hip belt
5. Quick release system
6. MOLLE carrier system
7. Raincoat storage
